

Milestone 3 – Feature Prioritization Report

Project: Product Sentiment Analysis and Feature Roadmap Prioritization

1. Feature List Consolidation Methodology

Features derived from M2 sentiment, mention frequency, explicit requests, and competitive gaps.

Top consolidated features: Rest timer between sets, Dark mode UI themes, Advanced nutrition / meal planning, Voice-guided workouts, Video exercise demonstrations.

2. RICE Framework Explanation

$$\text{RICE} = (\text{Reach} \times \text{Impact} \times \text{Confidence}) / \text{Effort}.$$

Reach = users affected per quarter; Impact = degree of impact (0.25–2); Confidence = certainty;

Effort = person-months.

3. RICE Parameter Estimation & Scores

Rest timer between sets – Reach: 2323, Impact: 2, Confidence: 1, Effort: 1, RICE: 4646 (Rank 1).

Dark mode UI themes – Reach: 2636, Impact: 1, Confidence: 1, Effort: 1, RICE: 2636 (Rank 2).

Advanced nutrition / meal planning – Reach: 6321, Impact: 0.25, Confidence: 1, Effort: 3, RICE: 527 (Rank 3).

Voice-guided workouts – Reach: 2323, Impact: 0.25, Confidence: 1, Effort: 2, RICE: 290 (Rank 4).

Video exercise demonstrations – Reach: 2323, Impact: 0.25, Confidence: 1, Effort: 2, RICE: 290 (Rank 5).

4. Ranking Interpretation

There is a clear score gap between Rank 2 and Rank 3, indicating strong prioritization clarity.

5. Top 5 Prioritized Features Rationale

Rest timer and Dark mode are high-impact, low-effort quick wins.

Advanced nutrition offers high reach but higher build complexity.

Voice and Video features improve engagement and differentiation.

6. Sensitivity Analysis

$\pm 20\%$ Reach and Effort variations do not change top 2 ranking.

7. Validation with Review Data

Top features align with high-mention M2 categories (Workout_Tracking, UI_UX, Calorie_Nutrition).

8. Recommended 6-Month Roadmap

Month 1: Rest timer; Month 2: Dark mode; Month 3–4: Advanced nutrition; Month 5: Voice; Month 6: Video.

9. Trade-offs and Constraints

Considered engineering bandwidth, content production costs, backend complexity, and monetization impact.

10. Visualizations

Conclusion

The RICE model converts M1 and M2 insights into quantitative execution decisions, ensuring balanced impact vs effort prioritization over a 6-month roadmap.
